

### PROOF OF FORMULA 3.352.3

$$\int_a^b \frac{e^{-\mu x}}{x+c} dx = e^{\mu b} [ \operatorname{Ei}(-\mu[c+b]) - \operatorname{Ei}(-\mu[c+a]) ]$$

The exponential integral is defined by

$$\operatorname{Ei}(x) = - \int_{-x}^{\infty} \frac{e^{-t}}{t} dt.$$

The change of variable  $t = x + c$  gives

$$\int_a^b \frac{e^{-\mu x}}{x+c} dx = e^{\mu b} \int_{a+b}^{a+c} \frac{e^{-\mu t}}{t} dt.$$

Now let  $s = \mu t$  to produce the result.
