

PROOF OF FORMULA 4.267.5

$$\int_0^1 \frac{(1-x)x^2}{(1+x)(1+x^2)} \frac{dx}{\ln x} = \ln \left(\frac{2\sqrt{2}}{\pi} \right)$$

In entry **4.267.4** it is shown that

$$\int_0^1 \frac{(1-x)x^a}{(1+x)(1+x^2)} \frac{dx}{\ln x} = -\ln \Gamma(a) + 3 \ln \Gamma \left(\frac{a}{2} \right) - 2 \ln \Gamma \left(\frac{a}{4} \right) + \frac{\ln 2}{2}(a+1).$$

This entry corresponds to the special case $a = 2$.
