

PROOF OF FORMULA 3.351.1

$$\int_0^a x^n e^{-\mu x} dx = \frac{n!}{\mu^{n+1}} - e^{-a\mu} \sum_{k=0}^n \frac{n!}{k!} \frac{a^k}{\mu^{n-k+1}} = \frac{\gamma(n+1, a\mu)}{\mu^{n+1}}$$

Formula 2.321.2 states that

$$\int x^n e^{-\mu x} dx = -e^{-\mu x} \left(\sum_{k=0}^n \frac{k! \binom{n}{k}}{\mu^{k+1}} x^{n-k} \right).$$

The result follows directly from here.

The expression in terms of the incomplete gamma function

$$\gamma(\alpha, x) = \int_0^x t^{\alpha-1} e^{-t} dt,$$

comes from the change of variables $t = \mu x$.
