## **FORMULA 3.411.3**

The original formula is

$$\int_{0}^{\infty} \frac{x^{\nu - 1} dx}{e^{\mu x} + 1} = \frac{1 - 2^{1 - \nu}}{u^{\nu}} \Gamma(\nu) \zeta(\nu)$$

 $\int_0^\infty \frac{x^{\nu-1}\,dx}{e^{\mu x}+1} = \frac{1-2^{1-\nu}}{\mu^\nu}\Gamma(\nu)\zeta(\nu)$  The change of variables  $t=\mu x$  and replacing  $\nu$  by a gives the new form (going back to x as the integration variable)

$$\int_0^\infty \frac{x^{a-1} \, dx}{e^x + 1} = (1 - 2^{1-a})\Gamma(a)\zeta(a)$$
